

## SYSTEM TOOLFLEX

Swedish ingenuity when you have to let go

## SYSTEM TOOLFLEX

System Toolflex is comprised of a series of simple and flexible equipment holders that facilitate the storage of handle-equipped tools in most environments. Toolflex is the natural accessory in storage sheds, garden sheds or garages, where a great variety of equipment is stored in small spaces.

The holders are made of a durable plastic material with grips of flexible EPDM rubber, which grasp tool handles easily and with only light hand-pressure. System Toolflex products are available in several variants – for installation on pipes or walls, separately or on aluminum rails. The holders work equally well indoors or out.

Hang and remove equipment with just one hand.

The holders are easily adjusted from side to side and the system can be extended to any length.

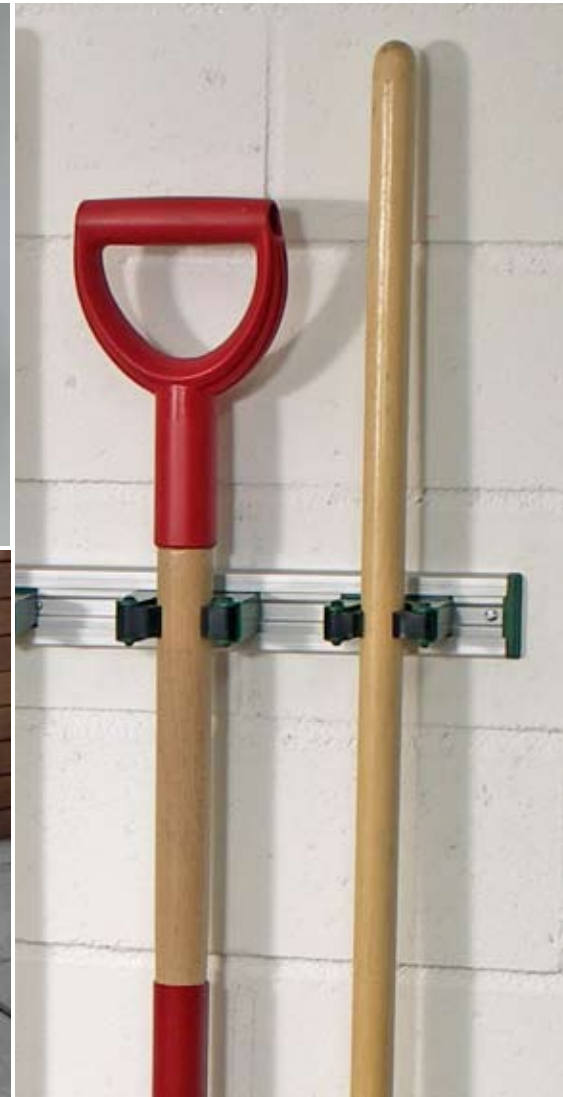

The holders have screw holes and they can be attached directly to surfaces without mounting rails.

Hooks are easily fitted in the rail recess.

Toolflex tube holders are available for many tube diameters.

## USER-FRIENDLY & FLEXIBLE

With Toolflex equipment holders, tools can be hung or taken down with just one hand, and thanks to their ingenious design, the holders can even keep heavier gear in place. With System Toolflex, all equipment and tools are neatly arranged and easily accessible. The products of the System Toolflex line are characterized by simplicity and flexibility and are all user-friendly.

Toolflex tool holders take a minimum of space when mounted, separately or on rails, and feature a variety of smart accessories, such as hooks and clips.

### rehab

In the "Rehab" section, products are provided that facilitate everyday living for those with limited mobility - at home, in hospitals or at healthcare centers. Simplicity and ergonomics are two important factors.

### cleaning

In the "Cleaning" section, the products are primarily intended for professional users, such as those in the Cleaning sector or food industry. Quality and ergonomics are important factors.

### garden

The "Garden" section features products for storage sheds, garden sheds or garages, where a great variety of equipment is stored in small spaces. Simplicity and quality are important factors.

### hobby & sport

In the "Hobby & Sports" section, products are provided for creating order in most recreational environments - in stables, sports centers, fishing sheds, etc., where a lot of things have to fit into small spaces. Space-saving and simplicity are two important factors.
